

An Evo Tram Shelter, Melbourne

**We believe street furniture should be an elegant blend of architecture, flexibility and functionality so that it makes a positive contribution to the urban environment.**

## **SHELTER RANGE**

Adshel Infrastructure's shelters are designed to provide an ordered appearance to the urban environment. At Adshel, we believe street furniture should be an elegant blend of architecture, flexibility and functionality so that it makes a positive contribution to the urban environment. The Adshel Infrastructure shelter range has been architecturally designed and carefully engineered to enhance, rather than compete with the surrounding landscape.

Adshel has worked not only with state and local governments but also with private partners to supply and install over 8,000 shelters throughout Australia as well as over 2,000 shelters in all major city centres in New Zealand.
